

PHDwin Version 3.1.14 - Release Notes

September 2023

Feature Addition:

- Added support for import of more flat file formats options, including .txt extensions, allowing user-defined separators, multi-header rows, and regional formatting of date and number.
- Added support for regional date and number formatting based on the selected regional settings of user's operating system.
- Included with this release is a refreshed V3TechConnect made for Build 14. This new spreadsheet is the most comprehensive PHDwin output ever, including calculated one liner values, calculated monthly values, case inputs (historical production, projections, investments, models), and present worth values all in one place.

Bug Fixes:

- Improved graph behavior and responses around zooming, scaling axes, dragging, among other mouse moves.
- Fixed the Day Trader theme convention compare window differences and disabled graph issues.
- Improved memory and socket use efficiency for processing speed.
